Stream Quality Survey

Date ______________________

Time ______________________

Name ______________________

Please refer to the Izaak Walton League's volunteer stream monitoring protocol and identification guides to learn how to complete this form. Please use the League's *Field Guide to Aquatic Macroinvertebrates* to complete portions of this stream quality survey form. For assistance, please call (800) BUG-IWLA or send an e-mail to sos@iwla.org.

Stream ______________________ Station # ______________ County/City ______________

Location ____

Weather Conditions (last 72 hours) ______________________________

Water temperature________ F°? C°? Avg. stream width ________ ft. Avg. stream depth ________ ft. Flow rate ____________ (above or below average)

Rocky Bottom Sampling

Before sampling, record riffle composition on the back of this form. Take 3 samples in the same riffle area, fill out this form, and keep the highest scoring sample for your records. To help track the number of samples you have collected, check one of the boxes below:

☐ Sample 1 ☐ Sample 2 ☐ Sample 3 ☐ Is this your highest score sample?

Muddy Bottom Sampling

Record the total number scoops taken from each habitat type and provide details to best describe the specific habitat on the lines below.

☐ Steep bank/vegetated margin ______________________

☐Woody debris with organic matter ______________________

☐ Rock/gravel/sand substrate ______________________

☐ Silty bottom with organic matter ______________________

Macroinvertebrate Count

Indicate if the macroinvertebrate species listed was in the video. Total the number of species in each category and multiply according to the correct category. For example, if you identified 3 species in the Less Sensitive category, multiply by 2. Then add together the three totals from each column for your stream's index value. Determine the overall water quality of the stream sample site based on your Total index value. E.g., if your Total index value is 13, the Water Quality Rating is Fair.

SENSITIVE	LESS SENSITIVE	TOLERANT
____ Caddisflies (except net spinners) ____ Mayflies ____ Stoneflies ____ Water snipe flies ____ Riffle beetles ____ Water pennies ____ Gilled snails	____ Dobsonflies ____ Fishflies ____ Common net spinning Caddisflies ____ Crane flies ____ Damselflies ____ Dragonflies ____ Alderflies ____ Crayfish ____ Scuds ____ Aquatic sowbugs ____ Clams ____ Mussels	____ Aquatic worms ____ Black flies ____ Midge flies ____ Leeches ____ Lunged snails
____ # of letters multiplied by 3 =____	____ # of letters multiplied by 2 =____	____ # of letters multiplied by 1 =____
Now add the three totals from each column for your stream's index value. Total index value = ____________		

Compare the final index value to the following ranges of numbers to determine the water quality of the stream sample site.

Water Quality Rating

____ Excellent (> 22) ____ Good (17-22) ____ Fair (11-16) ____ Poor (< 11)
