	F	Vateria indica						M		Neolitsea	N		Y	R	T
	N	Antocarpus hirsutus						S		Diospyros	N				
		Myrsine biddoni						C							

¹ When establishing a new plot record status as **NEW**. If a peg is unable to be established on a new plot (eg due to the physical characteristics of the substrate) record the status as **NEW** and 'unmarked' alongside in the species column. If the plot is a re-measure and the peg is unable to be established; record 'REP' in the Peg Status column and 'unmarked' alongside in the species column. When the original plot pegs are not found and new peg used, **status = replaced (REP)**. When original plot pegs are found but are not in their original place and this peg is put back into the site where you think the subplot should be, **status = re-established (REE)**. When the original peg is found and in the right location, **status = refund (REF)**.
